ABSTRACT

This article presents the scientific theoretical basis of the formation of psychological characteristics of a person. The methods and aspects of forming the essence of personality aspects of girls and boys are highlighted.

Keywords :

Person, tradition, customs, feelings, family, society, environment, community, group.

Today, for the society that is on the path of development and competitiveness, the education of a modern person with developed mental and emotional intelligence has been defined as an urgent issue. The President of the Republic of Uzbekistan Sh.M. Mirziyoyev expressed the following views at the meeting.

"The biggest issue is the promotion of human interests in Uzbekistan from the point of view of justice, from the point of view of economy, from the point of view of spirituality, from the point of view of enlightenment."

"New Uzbekistan begins at the school threshold."

Therefore, today human resources have a great responsibility. At the moment, it is necessary to develop, prepare and supply human resources for the society. A perfect person means a mature person who is patriotic, humanitarian, independent-thinking, conscious, creative, inquisitive, striving for innovation understood.

Therefore, changes in the current period require that everyone has knowledge, potential, effective work, high culture, skills, consciousness, creativity, and educates a person who can feel his responsibility before the society and the people. Therefore, in social

life, while protecting the interests of man as a powerful force that changes the world, it is necessary to understand the essence of man, to reveal the meaning of his existence, his place in life and his life in such a way that he understands the incomparable multifaceted creative possibilities. Is manifested in the change of attitude.

This requires the formation of a person as a creative, free person in a condition where the possibility of formation and development of the person is known as an object of history, society and one's own life.

A person is a person who can demonstrate his identity and abilities in society in every way, who is enlightened, has a perfect grasp of worldly knowledge, is mentally mature, has high talent and potential, is spiritually mature, morally clean, and physically healthy. A creative person who can feel the beauty of life is understood. This definition of the person is of great importance in the current era and is considered as a model of human personality education and is the basis for the technology of perfect personality education in the educational system. The focus should be on the formation of a person who thinks independently, fully understands his

rights and duties, is patriotic, selfless, knowledgeable - with a new consciousness.

Social problems accompanying the development of society have led to serious changes in family values and traditions: the usual forms of gender relations are being broken, ideas about the value of the person are changing, marriage and family relations are promoting alternative forms of the person. Is increasing. In Uzbek families, it is important to create conditions for promotion of personal issues and to prepare young people for the family, and as the main link of society, the family acquires special importance, because it is in the family that a person acquires the basic behavioral skills that form the basis of marriage behavior. Ethnic characteristics are increasingly becoming the subject of research on the topic of social development.

The national personnel training program is based on and serves the idea of "Uzbekistan - a great country with a future".

The process of forming an independent person is long and complex, on the one hand, it requires the improvement of all state structures and social organizations, especially the content of the educational system, and on the other hand, the need to establish a single education system that directly ensures the implementation of this issue.

The idea of personal orientation is finding its further development today;

teaching the growing generation to live, not limited to giving moral advice, but is not specific to a person, but can feel his life as his own life and help his internal, spiritual - moral, general cultural growth, and the environment expanding, influencing the strengthening of the community of children and adults, he is a real person who is growing.

Therefore, it is necessary to achieve that a person today is not only a wide range of knowledge, but also highly cultured, creative in working with children and teenagers.

Creating a principled new scientific school for training young scientists who study historical heritage on a new modern methodological basis;

it is necessary to carry out important work on the publication of popular scientific

and informational information for children and young people.

Socio-economic and rapid reform process, the rapidly changing living conditions of society, giving the educational system the characteristics of effectiveness, that is, meeting the requirements of social and economic development, taking into account the individual's abilities and talents are an opportunity and condition.

Requires the creation of conditions.

Ensuring the effectiveness and efficiency of educational and vocational programs is inextricably linked with the problem of stratification of the educational process. In the current conditions, it is necessary to introduce the principles and mechanisms of education differentiation into the continuous education system, not in words, but in deeds.

The unique aspect of personal relations from economic, political, diplomatic and other relations is that this relation is mainly synthesized with moral, intellectual, labor, professional, sophistication, environmental and other types of education.

The creative intellectual potential of young people can be determined in the following order:

The procedure for determining the creative intellectual potential of young people				
Ability to self-analyze and be critical of one's own work to be in a relationship	Ability to allocate time and use it effectively	Enrichment of consciousness and worldview in life activity of the occupation	Understanding that words and deeds are one and always complement each other	Achieving the goals he has set for himself

Coming up with new thoughts and ideas; the pursuit of creativity; active participation in scientific research works.	The ability to show creative activity in the conditions of market relations and new ownership	The realization that the person will mature; feeling that it is creative work; to be able to evaluate his qualities.	Seeking to apply non-traditional attitudes in the educational process; ability to implement modern information technologies	Being able to contribute to the education of a healthy generation; able to fulfill the requirements of social orders and standards.
--	---	--	---	---

Knowledgeable people who honor their profession will certainly be cultured.

It should be noted that cultural relations are based on the national idea and pride.

A perfect person, as a person and a citizen, should know his mother tongue and the history of the nation perfectly.

That is why he respects religion, customs, spiritual and material values, and is always proud of it.

The feeling of pride is in the spirit of common sense.

In order to raise thoughts to the level of an idea, it is necessary to achieve its effectiveness, weight and efficiency. Self-awareness forms the feelings of patriotism and patriotism in pupils and students, encourages them to save the Motherland from all kinds of evil forces. Studying the scientific research of psychologists from far and near abroad, we see that they have recorded valuable scientific results on the psychological foundations of the important professional qualities of a person and the importance of socio-cultural, national-territorial and pedagogical-psychological factors affecting this process.

The formation of personal duties and responsibilities, the formation of a culture of communication in the process of conversations

and discussions leads to the elimination of conflicts that are forming in the team, and to the transition of interpersonal relations on a healthy and democratic basis.

Opportunities for timely resolution of conflicting and problematic tasks that may be encountered by responsible persons and managers in their relations with individuals are created.

Sincerity plays an important role in the formation of personal professional and cultural relations.

Only sincere people can truly love.

Such people are well aware of their personal duty.

He does not abuse his position.

He loves and respects his profession.

He dedicates himself to overcoming any difficulties that he may encounter in the teaching profession.

Owners of such professions are selfless and have faith.

He loves his country and motherland dearly.

A. Bandura and Richard Walters say that the organization of educational processes and the study of the laws specific to the psychology of individuals are important in professional training.

Education differentiation is one of the main features of the modern education system.

It provides students with the opportunity to learn in different ways based on their personal needs, abilities, opportunities, interests, and career choices. Creation of mechanisms and conditions that ensure the effective interaction of all subjects participating in the educational process. In general, there are all components of this system - family, continuing education, neighborhood, public associations, foundations. [5]

However, first of all, it is necessary to increase their internal effectiveness, and secondly, to improve their effectiveness, that is, their coherence, their activities directed towards each other.

Fundamental revision as social institutions. In this case, turning the school not

only into a place of science, but also into a real cultural and educational center. They must be in close contact with the neighborhood, family, public associations (first of all, children's and youth organizations).

The spirit of creativity in these places leads to the creation of an atmosphere of social activity, personal participation, mutual cooperation, on the one hand, to the education of an independent thinking person, and on the other hand, to the formation of a new social environment and way of thinking. Educating the young generation in the spirit of national ideals and national moral values undoubtedly implies strengthening physical and mental health and forming the foundations of a healthy lifestyle.

In the young generation, the priority tasks should be to educate the high ideals of life activity, morality, humanity, and to use the forms, methods and means of physical education and sports.

Therefore, reaching the mass of this situation accelerates the development of society and serves to expand the ranks of selfless, tireless people.

As a result of this, a mature person in his life and work moves to the stage of social-historical psychological model, becomes a source of development of the field with his potential. The model of individuality acquires national and human significance, acts as a driving mechanism of development.

Characteristics of a person at this level include:

possession of high intelligence, productivity in intellectual activity;

reasonable assessment of one's capabilities in the processes of behavior, activity, and dealings;

a perfect person is a high level of maturity, characterized by the possession of excellent knowledge and views in several fields in the current period;

continuous desire for innovations, ability to implement creative solutions;

to ensure the practical expression of one's talent and creative potential;

to achieve excellence, productivity and dynamism in the views of each specialty subject;

The next level of maturity of a comprehensively developed person is called mental wisdom. Mental wisdom is moral culture, high emotions, behavior etiquette, compliance with the rules of nature and society, moral maturity, rational approach to the manifestations of political-legal, economic consciousness.

According to Prof. B.Ziyomukhammadov, the universal creative qualities and qualities of a well-educated person can be imagined as follows:

- business qualities and qualities: hard work, diligence, initiative, responsibility, honesty, competence, perfection, quality, dexterity, resourcefulness, organization, orderliness, entrepreneurship, accuracy, thrift, perfection, masiliz and others.

- ingenuity, perceptive qualities and qualities: intelligence, calmness, common sense, wisdom, reasonableness, prudence, sensitivity, ingenuity, bluntness, evidence, efficiency, literacy, curiosity, passion, etc.

- character traits and qualities of stability: activity, determination, quickness, quick-temperedness, enthusiasm, cheerfulness, stability, standing in one word, stability, bravery, discipline, self-control, seriousness, self-control

stubbornness, cold-heartedness, self-demanding, inferiority complex, cannibalism, self-willedness, etc.

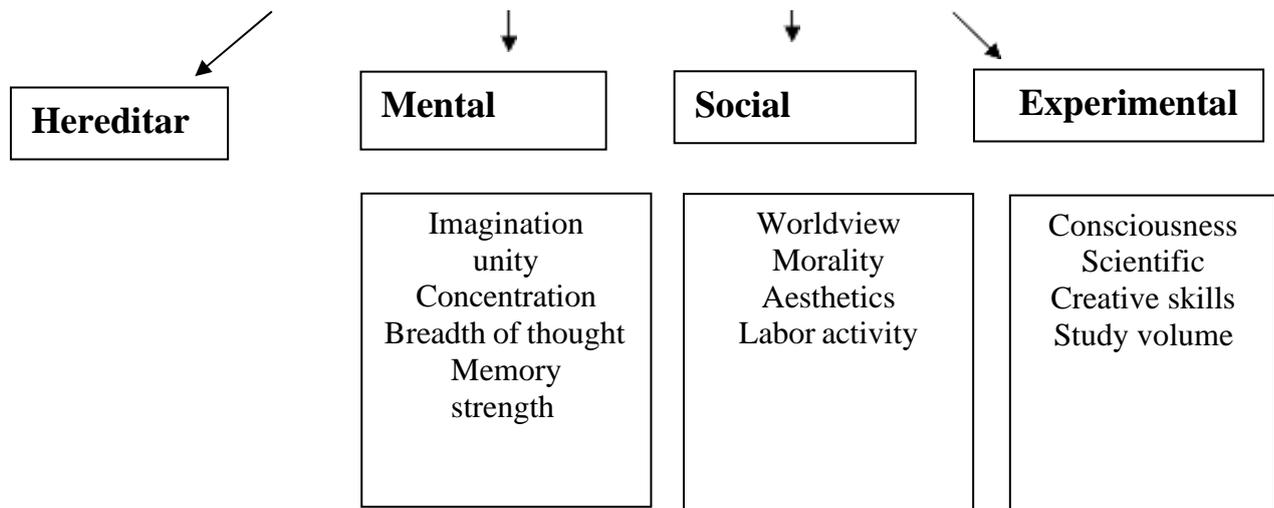

- general characteristics and qualities of a person: cuteness, beauty, attractiveness, charm, modesty, dignity, development, respectability, poetry, spirit, magnificence, individuality, maturity, seriousness, civility, upbringing, etc.

- moral traits and qualities of a person: humanity, friendship, care, enthusiasm, sincerity, playfulness, humanity, childishness, faith, selflessness, politeness, modesty, kindness, openness, forgiveness, hospitality, kindness, capacity and others.

- feelings and qualities of passion: optimism, cheerfulness, solemnity, cheerfulness, cheerfulness, trustworthiness, imagination, faith in the future, kindness, non-

conceit, generosity, nobility, fire, delicate

nature, shyness, shyness, chastity, etc.

Today, the goals of the pedagogical science of our republic in terms of raising a mature generation are determined by the following:

comprehensive research of the problems of raising a mature person;

To continue development of education in o

Types of personal qualities of young people

development at the level of world requirements; to create an opportunity to shape the content of education and national ideology, taking into account the foundations of universal human value and national culture;

Khidirov and others is noteworthy.

Conclusions and recommendations.

necessary qualities of a perfect human being;

There should be new approaches about the socio-psychological characteristics of a person's self-awareness, the impact of these

characteristics on ensuring the effectiveness of educational processes and improving activities. Self-awareness in the period of the formation of professional qualities in a person, conscious attitude to the educational process and the acquisition of a profession, the effectiveness of his activity in arming himself with the necessary pedagogical and psychological knowledge specific to the education and training of students provision is an important factor. It is ready to effectively organize educational processes on the basis of new technologies, and on this basis, mechanisms are created for the formation of skills of independent thinking and a creative approach to each problem. It is appropriate if the professional qualities and qualities are fully mastered.

Today, behavior plays an important role in the development and establishment of competitive, qualified, intellectually developed and modern educational relations.
