ABSTRACT:

In this article: Application of interactive methods in the educational process. The qualities of the factor of increasing the effectiveness of education are given. It was seen that there are advantages of organizing lessons in interactive methods.

Keywords: Education, Teaching methods, educational process, Interactive, mutual activity, Pupils.

Today, it is one of the important tasks of education to interest the students of the teenage age in science, and also to form the necessary knowledge, skills and qualifications in them. In particular, if we approach the above issue with the example of 11th graders, they are usually described as a group of students who cause a lot of difficulties for teachers. If we don't count on their interests and youthful characteristics, they will remain in their shell. In order to avoid such problems, it is necessary for every pedagogue to work hard on himself and to prepare himself repeatedly for each lesson and bring news of interest to them on the topic. After all, one of the wise men says about the important rule of success: "You should work every day as if you were put on the scale. Do the work you are ordered to do, and you will receive more. Know that the most popular way to achieve success is to work hard." It is natural that the topics in the mother tongue textbooks today are somewhat difficult for them. At this point, another question arises: What methods can be used in the formation of speech competence in students of adolescent age? Of course, in such cases, various methodical games and methods are effective in making students interested in the lesson and forming their ability to listen. In fact, by instilling the knowledge of science into the hearts of millions of our children, It is worthwhile to express all our praises to our hardworking and noble teachers who are raising them to be people worthy of the country. If we conclude from the above mentioned ideas, nowadays the teacher should use such opportunities to work on himself and act as a

guiding star for the students to choose the right path. It is not for nothing that our president said that the new Uzbekistan starts from the threshold of the school.

Indeed, school has a great role in educating the young generation. It should be said that according to President Shavkat Mirziyoyev's opinion, "New Uzbekistan starts from the school's doorstep", we teachers should work on ourselves. We should never forget that we are the main link in the education of the young generation. The future of the country its beautiful perspective will rise based on the advanced and innovative ideas of talented young people. Today, in order to build a developed state, we require our highly responsible and energetic pedagogic staff to bring up aspiring, knowledge-hungry students. It requires a lot of work from parents as well as teachers to adequately prepare and educate the young generation for the rapidly developing era, to inculcate in them the characteristics of humanity with the concept of modernity. Such situations can only be positive if there is a search, aspiration and desire. Today, the teacher and pedagogues are again considered as the main link of the society. And this is a higher qualification than them, requires quality teaching skills. In the classroom, the teacher appears as a mirror of the total aspects of the students. Pupils see, understand and analyze the world through their teachers standing in front of them. For this reason, it is necessary for a pedagogue to be able to penetrate into the heart of his student, take him by the hand to understand the whole world, to take to heart the characteristics of humanity, and invite him to be sincere. We can show them the right way only when we know what the black eyes are looking at us and what they want. The greatest achievement of a real pedagogue is to know how to encourage when necessary, and to gradually eliminate shortcomings when necessary. The culture of behaving and speaking correctly increases respect for the teacher. The speech is fluent, each piece of information given is based on clear evidence.

It just depends on the dexterity of the teacher to organize the methods according to the topic. Importantly, it depends on the skill of the teacher to effectively organize the lesson by creating new methods. We should create such a pedagogue from ourselves that the student who meets us in the future will treat us as if he saw a great person, a great person. As the younger generation learns to see the world through our eyes, it is up to us to create a vision for them and teach them to live in that vision. Every work done on the basis of courage and tireless work will definitely bear fruit! Each educational process raises its quality level with its wealth of modern technologies and new approaches. In this way, both the state and pedagogues, as well as the young generation, are equally responsible. Nowadays, the interest and interest in the use of interactive methods, innovative technologies, pedagogical and information technologies in the educational process is growing day by day. One of the

reasons for this is that until now, in traditional education, students were taught to acquire only ready-made knowledge. Modern technologies teach them to search for the acquired knowledge by themselves, to study and analyze independently, and even to draw their own conclusions. One of the reasons for this is that until now, in traditional education, students were taught to acquire only ready-made knowledge. Modern technologies teach them to search for the acquired knowledge by themselves, to study and analyze independently, and even to draw their own conclusions. One of the reasons for this is that until now, in traditional education, students were taught to acquire only ready-made knowledge. Modern technologies teach them to search for the acquired knowledge by themselves, to study and analyze independently, and even to draw their own conclusions.

Enhancing the student's interest in knowledge independently with a creative approach to each issue; organization of cooperative activities of the teacher and the student at all times. The main basis of pedagogical technology depends on the selected technologies for the cooperation of the teacher and the student to achieve a guaranteed result from the set goal. Each educational technology used to achieve a guaranteed result for the purpose set in the teaching process can organize cooperative activities between the teacher and the student, if both of them can achieve a positive result. during the learning process, if students can think independently, work creatively, search, analyze, draw their own conclusions, evaluate themselves, the group, and the group, and the teacher can be effective only if he can create opportunities and conditions for such activities. Each lesson, subject, educational subject has its own technology, that is, pedagogical technology in the educational process is an individual process, directed to a certain goal based on the needs of the student, pre-planned is a pedagogical process aimed at providing a planned and guaranteed result.
